

Smart Business Technology for Smart Business Security

Tips for Keeping Assets Secure Using Wireless Technology

Use a DIY System

DIY options such as the **Monnit Remote Monitoring Systems** offer user-friendly mobile security controls to monitor temperature, motion, lighting and entry points within a business.

Capture Images Remotely

Surveillance cameras such as the **Guardzilla All In One Security Camera**, which take photos and videos based on motion, provide an added layer of security.

Protect Company Information

Mobile device management (MDM) allows companies to manage, configure, support and secure devices from one core console, so employees can access company information without compromising the security of a business

Install Fleet Management and GPS Asset Tracking Devices

Fleet and vehicle tracking devices use mobile apps to track equipment and reduce theft.
